

# EMPLOYMENT AND UNEMPLOYMENT

SEPTEMBER 1975

AUSTRALIAN
BUREAU OF
BTATISTICS

CANBERRA

Reference No. 6.4

#### EMPLOYMENT AND UNEMPLOYMENT, SEPTEMBER 1975

This bulletin contains particulars of the numbers of employed wage and salary earners (referred to in the tables as "employees"), job vacancies registered and unemployed persons.

Seasonally adjusted statistics appear in Tables 1, 3 and 8-11. The methods used in seasonally adjusting these statistics are explained in Seasonally Adjusted Indicators, 1975 (Reference No. 1.10).

Preliminary estimates of employees are published each month in *Employed Wage and Salary Earners*: Preliminary (Reference No. 6.12).

CONTENTS

NOTE. See page 3, paragraphs 10-15, regarding the proposed adoption of new benchmarks and revision of estimates from July 1966.

Persons receiving unemployment benefit, October 1973 to October 1975

#### 1. EMPLOYED WAGE AND SALARY EARNERS

The figures in this section generally relate only to civilian wage and salary earners, not the total labour force: they therefore exclude employers, self-employed persons and unpaid helpers. Also excluded, because of the inadequacy of current data, are wage and salary earners in agriculture and private domestic service. For the sake of brevity, wage and salary earners are referred to in the tables as "employees". Defence forces are included in Table 1.

- 2. The estimates in Tables 1 to 6 except those relating to government employees and defence forces, are based on comprehensive data (referred to herein as "benchmarks") derived for the purpose from the population census of June 1966. Month-to-month changes shown by current data (see below) are linked to the benchmark data to derive the monthly estimates.
- 3. Although the series measure reasonably well the short-term trends in employment in the defined field, they may be less reliable for longer-term measurement. There are conceptual differences between benchmark and current data, and changes in such factors as labour turnover, multiple jobholding and part-time working all affect the trend over longer periods.

#### Concepts and definitions

4. The concepts and definitions applicable to these estimates are those which were adopted at the 1966 population census and conform closely to the recommendations of the Eighth International Conference of Labour Statisticians. At the census the following questions were asked in respect of all persons fifteen years of age and over:

"Did the person have a job or business of any kind last week (even though he may have been temporarily absent from it)?"

"Did the person do any work at all last week for payment or profit?"

Provided he had not been temporarily laid off by his employer without pay for the whole of the week, a person who answered "yes" to either of these questions was classified as employed. Persons in this category who were stated to be "working for wages or salary", except members of the defence forces, persons employed in agriculture or private domestic service, and crews of overseas ships, have been included in the benchmarks for the current series.

5. Current data supplied by reporting enterprises or establishments generally refer to persons on the payroll for the last pay-period in each month. Persons who are on paid leave or who work during part of the pay-period and are unemployed or on strike during the

rest of the period are generally counted as employed. Those not shown on employers' payrolls because they are on leave without pay, on strike or stood down for the entire period are excluded.

6. Government employees comprise not only administrative employees, but also all other employees of government bodies (Australian, State, local and semi-government) on services such as railways, road transport, banks, post office, air transport, education (including universities), radio and television, police, public works, factories, departmental hospitals and institutions, etc.

#### Current data

- 7. The data needed to derive the estimates for periods subsequent to the benchmark date (June 1966) are obtained from three main sources, namely, (a) current payroll tax returns; (b) current returns from government bodies; and (c) some other current returns of employment (e.g. for hospitals); the balance, i.e. unrecorded private employment, is estimated. At June 1966 recorded employment obtained from the foregoing sources accounted for about 85 per cent of the total number of employees in the industries covered, as determined by the census. Since then the percentage covered by direct collections has increased, and at June 1974 was estimated to be about 90%.
- 8. Payroll tax returns are lodged at present by all employers paying more than \$400 a week in wages (other than certain Australian Government bodies, religious and benevolent institutions, public hospitals and other similar organisations specifically exempted under the Australian and State Pay-roll Tax Acts, 1971-1974).

#### Industry

9. The industry classification used throughout the series is that of the population census of June 1966. The estimated monthly changes are derived mainly from returns from employers relating to establishments or enterprises, but the June 1966 benchmark figures were derived from particulars recorded for individuals on population census schedules. The latter do not in all cases provide precise information to allow accurate coding of industry. Industry dissections of the census totals of wage and salary earners were therefore adjusted to be consistent as far as possible with industry coding at the establishment level. For this reason, and because crews of overseas ships were excluded from the benchmark figures, the estimates for June 1966 differ from those published in census bulletins which show particulars of the occupational status and industry of the population, and in other publications which contain population census results.

## Adoption of new benchmarks and revision of current estimates

- 10. As results from each successive population census become available it is customary to derive from them new benchmarks for the monthly employment series, and to revise the published estimates for all periods subsequent to the date of the previous census. Indications are that if 1971 census totals were to be used as benchmarks for the employment series, the level of the monthly estimates would have to be significantly reduced. However. evidence from post-enumeration surveys indicates that the filling in of census questionnaires by householders tends to identify a smaller number of persons as being in the labour force than do other methods of measurement (e.g. household surveys conducted by personal interview), and that components of the total labour force, such as employed. wage and salary earners, tend to be affected in the same way. This tendency may have increased between the 1966 and 1971 censuses.
- 11. Comparison between census results and the monthly estimates of employed wage and salary earners is affected not only by the discrepancy referred to above but also by the accumulation of errors in the intercensal employment estimates and differences in the methods of industry classification. The Australian Standard Industrial Classification was adopted in coding the industry of employees covered by the 1971 population census, whereas in the monthly estimates the 1966 census classification is still used. (See paragraph 9 above.)
- 12. New June 1971 benchmarks for the employment series have been established by the use of census and other relevant data, and the current series from July 1966 are being revised. The revision is expected to reduce the level of the current estimates. In the meantime the monthly estimates will continue to be published on the present basis, since they are regarded as

sufficiently accurate for the measurement of short-term movements. However, caution should be exercised if they are used as indicators of longer-term change.

#### Estimates for earlier periods

- 13. Detailed industry figures for each State and Australia and the government employment series for the period June 1966 to June 1971 were published in two special bulletins (Reference No. 6.23) issued on 24 April 1970, and 11 January 1972.
- 14. In due course the estimates for periods prior to June 1966 will be revised, but on a basis comparable with that of the 1961 census benchmarks, the information needed to revise these benchmarks on the 1966 census basis not being available.

#### Discontinuity of series

- 15. Estimates for the period June 1966 to date are not comparable with those for earlier periods, because of (a) the adoption of a new definition of the labour force in the 1966 population census, from which the benchmarks for the current series were derived and (b) the inclusion of full-blood Aborigines. The new definition resulted in the inclusion of a considerable number of part-time employees (mostly females) who had previously been excluded.
- NOTE. 1. Any discrepancies between totals and sums of components in tables are due to rounding.
  - 2. The following symbols mean:
  - .. Nil or less than 50 persons or not applicable.
  - r Figure or series revised since previous issue.

    Break in continuity of series (where drawn across a column between two consecutive figures).
    - † Affected by industrial disputes.

<sup>(</sup>a) Vacancies notified to the C.E.S. which were still unfilled at the Friday nearest the end of the month and which employers claimed could be filled if labour were supplied immediately or within the following month. Vacancies for full-time, part-time, permanent, temporary, and seasonal positions are included. (b) Includes the Australian Capital Territory. (c) Includes the Northern Territory. (d) The methods used in seasonally adjusting these statistics are explained in Seasonally Adjusted Indicators, 1975 (Reference No. 1.10). (e) Northern Territory estimated. During December 1974 the cyclone in Darwin caused some minor loss of records.

#### 3. UNEMPLOYED PERSONS

The tables in this section contain (a) estimates of the total number of persons unemployed, derived from the quarterly population survey, (b) the numbers registered with the Commonwealth Employment Service as unemployed, and (c) the number in receipt of unemployment benefit.

## Total Unemployed Persons : Population Survey Estimates

- 2. The quarterly population survey is carried out on a sample basis throughout Australia in February, May, August and November each year. Interviews are conducted during a period of four weeks in the State capital cities and two weeks in other areas. Particulars of the numbers of persons employed or unemployed, and of the total labour force, are published each quarter in a mimeographed bulletin *The Labour Force* (Reference No. 6.20).
- 3. For purposes of the survey, unemployed persons are defined as all those who, during the whole of the week prior to the interview week, did no work at all and either:
  - (a) did not have a job or business and were actively looking for work (including those who stated that they would have looked for work if they had not been temporarily ill or believed no work was available or had not already made definite arrangements to start work in a new job after survey week), or
  - (b) had a job from which they were temporarily laid off without pay for the whole week.
- 4. Unemployed persons therefore comprise those looking for full-time work, those looking for part-time work and those temporarily laid off from either full-time or part-time jobs. This definition of unemployed persons conforms closely to that recommended by the Eighth International Conference of Labour Statisticians, Geneva, 1954.
- 5. Since the estimates are based on a sample, they may differ from the figures that would have been obtained from a complete census using the same

questionnaires and procedures. There are about two chances in three that the differences would be less than 3,000 for total unemployed males, less than 3,000 for total unemployed females and less than 4,000 for total unemployed persons, and about nineteen chances in twenty that they would be less than twice these figures. Further details about the survey and the reliability of estimates will be found in the quarterly bulletin *The Labour Force* (Reference No. 6.20).

- 6. The sample estimates will differ from the number of persons registered with the Commonwealth Employment Service (see Table 10) as not employed, awaiting placement in full-time employment, for a number of reasons, including the following:
  - (a) the survey estimates include persons looking for part-time work as well as those looking for full-time work,
  - (b) they exclude persons who did any work at all during the survey week, even though they may subsequently have become unemployed and registered with the Commonwealth Employment Service, or have done so little work as not to lose eligibility for unemployment benefit,
  - (c) they represent averages over a period (see paragraph 2), whereas the numbers registered refer to a particular day,
  - (d) they are subject to sampling variability (see paragraph 5),
  - (e) they include some unemployed persons (particularly females) who do not register with the Commonwealth Employment Service, and
  - (f) they exclude any persons registered as unemployed who find jobs but do not notify the Commonwealth Employment Service at once that they have done so.
- NOTE. The Estimates shown in Table 9 have been revised by using population estimates based on the results of the 1971 population census. Previously published estimates were based on population estimates derived from 1966 Census results. For details, see The Labour Force, May 1975 (Reference No. 6.20).

<sup>(</sup>a) Aged 15 years and over. For definition, see page 11. (b) The number of unemployed in each group as a percentage of the labour force in the same group. (c) See note (d) to Table 8. (e) Answers to questions asked for the first time in February 1975 indicated that the number of persons who did no work but would have taken a job during the survey week and who had been actively looking for work at some time in the four weeks before the interview week was approximately 291,800 in February 1975; 252,500 in May 1975 and 243,800 in August 1975.

<sup>\*</sup> Estimates less than 4,000 are not published because they would be subject to sampling variability too high for most practical purposes. Although figures for these small components can be derived, they should not be regarded as reliable.

<sup>(</sup>a) Comprises all persons who were still registered with the Commonwealth Employment Service (C.E.S.) at the Friday nearest the end of the month, who claimed when registering that they were not employed, and who were seeking full-time employment, i.e. 35 hours or more per week. They include persons referred to employers but whose employment was still unconfirmed, and persons who had recently obtained employment without notifying the C.E.S., all recipients of unemployment benefit are included. (See Table 11). (b) Includes the Australian Capital Territory. (c) Includes the Northern Territory. (d) See note (d) to Table 8. (e) Northern Territory estimated. During December 1974 the cyclone in Darwin caused some minor loss of records.

<sup>(</sup>a) Number on benefit at Saturday nearest the end of the month. State and Territory classification is based on location of office from which payment of benefit is made. (b) See note (d) to Table 8. (c) No benefits were paid by the Department of Social Security office in Darwin. A small number of benefits were paid by the Alice Springs office but no information is available. (d) Figures for April 1975 and subsequent months are not strictly comparable with those for earlier months due to the introduction of new administrative procedures.

Australian Bureau of Statistics Canberra, A.C.T. 2600

F. B. HORNER
Acting Commonwealth Statistician

NOTE. Inquiries concerning these statistics may be made in Canberra by telephoning Mr T. Sharp on 52 7911 extension 6655 or, in each State capital, by telephoning the office of the Australian Bureau of Statistics.
